Active Section Global Warming Answers

Permafrost. Definition . Permafrost is any rock or soil material that has remained below 32° F (0° C) continuously for two or more years. The two-year minimum stipulation is meant to exclude from the definition the overlying ground surface layer that freezes every winter and thaws every summer (called the "active layer" or "seasonal frost").

Permafrost | Global Greenhouse Warming

A severe drought this year led to restrictions for the Panama Canal. The rains are now returning, but weather patterns are likely to make limits more commonplace in years to come.

Climate and Environment - The New York Times

"It is startling that the Vavilov Ice Cap, until recently an apparently stable ice cap with an almost entirely frozen bed that is almost entirely above sea level, is able to rapidly discharge such a large proportion of its ice in to the ocean in such a short period."

NASA scientist: global warming is nonsense - nsidc.org

Does "climate change" need a makeover? Some think so. Here's why. "It's now a crisis, an emergency, and we need to engage people to demand smart policy and innovation." The Environmental ...

Climate change news: U.S. policy, Paris climate agreement ...

Climate change adaptation is a response to global warming (also known as "climate change" or "anthropogenic climate change"), that seeks to reduce the vulnerability of social and biological systems to relatively sudden change and thus offset the effects of global warming. Even if emissions are stabilized relatively soon, global warming and its effects should last many years, and adaptation ...

Climate change adaptation - Wikipedia

"The Great Global Warming Swindle" (DVD/video/movie) is a pseudo-documentary in which British television producer Martin Durkin has fraudulently misrepresented both the data involved and scientists who have researched global climate.

"The Great Global Warming Swindle" is itself a Fraud and a ...

Scientific opinion on climate change is a judgment by a scientist, or by group of scientists, regarding the degree to which global warming is occurring, its likely causes, and its probable consequences.. Although most climate scientists concur with the scientific consensus described below, dozens of individual climate scientists, professional associations, and research programs have ...

Environment - National Geographic

The ACRIM composite shows a slight increase in TSI - the PMOD composite shows a slight decrease. Regardless of which dataset you use, the trend is so slight, solar variations can at most have contributed only a fraction of the current global warming. Scafetta 2006 uses the ACRIM composite and finds ...

Has the sun been cooling or warming in recent decades?

Wintertime Antarctic sea ice is increasing at a small rate and with substantial year-to-year variation. Monthly sea ice data show trends of increasing sea ice extent that are slightly above the mean year-to-year variability over the satellite record (1979 to present).

Therefore the main physics argument supporting enhanced global warming caused by increasing levels of CO₂ is the in height and thereby lower temperature of the effective radiating level of the atmosphere to space.

Doubling CO₂ and basic physics | Clive Best

Global area-averaged lower tropospheric temperature anomalies (departures from 30-year calendar monthly means, 1981-2010). The 13-month centered average is meant to give an indication of the lower frequency variations in the data; the choice of 13 months is somewhat arbitrary... an odd number of months allows centered plotting on months with no time lag between the two plotted time series.
