The aortic valve is located between left ventricle and aorta; includes noncoronary (posterior semilunar), right coronary (semilunar) and left coronary (semilunar) cusps.

### **Aortic Valve | Atlas of Human Cardiac Anatomy**

In anatomy, the atlas (C1) is the most superior (first) cervical vertebra of the spine.. It is named for the Atlas of Greek mythology, because it supports the globe of the head which is the skull.. The atlas is the topmost vertebra and with the axis forms the joint connecting the skull and spine. The atlas and axis are specialized to allow a greater range of motion than normal vertebrae.

This resource includes descriptions, functions, and problems of the major structures of the human eye: conjunctiva, cornea, iris, lens, macula, retina, optic nerve, vitreous, and extraocular muscles. A glossary is included. There also is a test for color deficiency and three short quizzes.

**Anatomy, Physiology & Pathology of the Human Eye**

These graphics from the NUCCA site also show further the types of subluxations that can occur at the upper cervical spine level. Which one actually occurs in each individual really depends upon their prevailing anatomy at that level and the direction and amplitude of the force imparted during the trauma they received.
