Note, by the way, that the `net.large_weight_initializer()` command is used to initialize the weights

and biases in the same way as described in Chapter 1. We need to run this command because later in this chapter we'll change the default weight initialization in our networks.

Ecological land classification is a cartographical delineation or regionalisation of distinct ecological areas, identified by their geology, topography, soils, vegetation, climate conditions, living species, habitats, water resources, and sometimes also anthropic factors. These factors control and influence biotic composition and ecological processes.

2. Sampling Sampling for Solids Analysis. Suspended solids present a special sampling problem. In order to avoid unrepresentative sampling or particle break-up, it is important that: (1) the fluid stream to be sampled is completely mixed at the point of sampling; and (2) the disturbance of the flow pattern of this stream is minimized, especially at the mouth of the sampling device.
