### **Fermats Last Theorem Unlocking The**

In number theory Fermat's Last Theorem (sometimes called Fermat's conjecture, especially in older texts) states that no three positive integers  $a$ ,  $b$ , and  $c$  satisfy the equation  $a^n + b^n = c^n$  for any integer value of  $n$  greater than 2. The cases  $n = 1$  and  $n = 2$  have been known since antiquity to have an infinite number of solutions.. The proposition was first conjectured by Pierre de Fermat in ...
