Speed and simplicity for everyday genomics. The NextSeq 550 System brings the power of a high-throughput sequencing system to your benchtop. With tunable output and high data quality, it provides the flexible power you need for whole-genome, transcriptome, and targeted resequencing plus the ability to scan microarrays including the Infinium MethylationEPIC BeadChip and other select BeadChips.

Photodiodes are one of the most popular sensor types for many light-based measurements. Applications such as absorption and emission spectroscopy, color measurement, turbidity, gas detection, and more, all rely on photodiodes for precision light measurement. Photodiodes generate a current proportional to the light that strikes their active area.
