Determination of sodium hydroxide concentration by alkalimetric titration. general remarks. Determination of sodium hydroxide concentration is about as often discussed as hydrochloric acid titration - both acid and base are strong, so calculation of titration curve and equivalence point are pretty straightforward. However, titration itself is not as easy.

3. Theoretically, in the electrolysis of sodium chloride solution, the gas volume ratio for H₂: Cl₂ is 1 : 1, BUT chlorine is slightly soluble in water and also reacts with the sodium hydroxide formed (the residual solution). Therefore the volume of chlorine gas observed is seems to be less than predicted.. Why 1 : 1 gas volume ratio?
