Welcome to Chemistrynoteslecture.com! Chemistry Help, through Chemistry Notes for AP Chemistry, High School Chemistry, College Chemistry and General Chemistry Courses, is provided.

Chemistry Notes Lecture

Lecture Notes for Chapter 16: Acids and Bases . I. Acids and Bases a. There are several ways to define acids and bases. Perhaps the easiest way to start is to list some of the properties of acids and bases.

4.1 Water, the Common Solvent. You may recall from Chapter 3, that we discussed labeling each reagent in the equation for a chemical reaction by its state. And that we included aqueous solution in the list of states, along with solid, liquid, and gas. Some of you may have correctly inferred that chemistry taking place in solution is a very important topic.

2 1. Introduction Chemical reaction kinetics deals with the rates of chemical processes. Any chemical process may be broken down into a sequence of one or more single-step processes known either as elementary processes, elementary reactions, or elementary steps. Elementary reactions usually involve either

First Law of Thermodynamics Adding heat Q to a crystal increases its internal energy U : $dU \propto dQ$ (indicates 'proportional') but if the crystal is allowed to expand, some of the added energy will be consumed by expansion dV , so the total energy of the crystal is reduced: $dU = dQ - PdV$ This is effectively the First Law of Thermo: that total energy (heat + P-V work) is conserved.

Your website is very good for learning all your notes are according to the book and there is no mistake in this notes. I am very happy to see that in website or internet i can study easily the subject in which i feel problem. So i just wants to say thank you to that person who subjected these notes on net for the welfare of students
