Cavitation is a phenomenon in which rapid changes of pressure in a liquid lead to the formation of small vapor-filled cavities, in places where the pressure is relatively low.. When subjected to higher pressure, these cavities, called "bubbles" or "voids", collapse and can generate an intense shock wave.. Cavitation is a significant cause of wear in some engineering contexts.

Some of the major unsolved problems in physics are theoretical, meaning that existing theories seem incapable of explaining a certain observed phenomenon or experimental result. The others are experimental, meaning that there is a difficulty in creating an experiment to test a proposed theory or investigate a phenomenon in greater detail.. There are still some deficiencies in the Standard ...

"I am very happy that you guys released this, not only it is a great idea it was executed properly. I will use this to build a basic AMP site for a customer. i looked at the video and demo sites and was very happy with what could be done. I would really like for Mobirise team to add more widgets to your free website design software.
